

Modulo Dipartimentale

**Modalità di raccolta del campione di
URINA per UNIROCOLTURA da
Catetere a permanenza**

Close the catheter underneath the collection valve with a clamp (or clip) at least one hour before collecting the urine; use disposable gloves, disinfect the device used for sample collection and using a sterile syringe and a thin needle, withdraw at least 20 mL of urine; transfer the urine into the sterile container that can be purchased in a pharmacy or provided by a laboratory. Immediately bring the sample to Microbiology, otherwise the sample can be kept in a refrigerator at +4°C for no more than 48 hours.
